The genus *Nothochrysa* (Planipennia, Chrysopidae) in Norway

Lars Ove Hansen & Kai Berggren

The genus *Nothochrysa* is reported for the first time from Norway. The two species *N. fulviceps* (Stephens, 1836) and *N. capitata* (Fabricius, 1793) were captured in light-traps in Kristiansand (VAY) in 1999. The biology and distribution are briefly discussed, and a key to identify the two species is supplied. Both species should be included in the national red-list with the category «declining, care demanding» (DC) or «declining, monitor species» (DM).

Key words: Planipennia, Chrysopidae, *Nothochrysa*, red list.

*Lars Ove Hansen*, Zoological Museum, University of Oslo, Sars gate 1, N–0562 Oslo, Norway.
