

Collembola from the Baltic Sea coast

Edīte Juceviča

Juceviča, E. 2001. Collembola from the Baltic Sea coast. *Norw. J. Entomol.* 48, 217-222.

A survey of Latvian Baltic Sea coast Collembola is presented, reporting 84 species along a gradient from the tidal zone to the inland. 19 species were found for the first time in Latvia. A new undescribed species of the genus *Archisotoma* was discovered. The highest number of species was recorded from grey dunes (46) and seashore meadow sites (44).

Key words: Collembola, Baltic Sea, coastline
