

***Folsomia bisetosella* n. sp. A new species of Collembola (Isotomidae) from Greenland and Northern Europe**

Arne Fjellberg

Fjellberg, A. 2005. *Folsomia bisetosella* n. sp. A new species of Collembola (Isotomidae) from Greenland and Northern Europe. *Norw. J. Entomol.* 52, 111-113.

Folsomia bisetosella occurs in dry coastal habitats in Greenland, Iceland, Faroe Islands, Norway, Sweden and Denmark. It differs from the related *F. bisetosa* by smaller size, absence of anterolateral microsensillum on the first abdominal segment, reduced number (3) of prelabral setae, presence of seta ml₁ on dorsal side of manubrium and more elongate maxillary lamellae.

Key words: Collembola, new species, *Folsomia bisetosella*, Europe.
